

Project Title: Estimation of proton heating rate in interplanetary magnetic switchbacks measured by Parker Solar Probe

Project Reference Code: Adhikari-UAH

Name of Project Leader: Laxman Adhikari

Host Facility: The University of Alabama in Huntsville

Internship Location: CSPAR, Cramer Research Hall, UAH

Host Facility Location: 320 Sparkman Dr., Huntsville, AL 35889

Project Description:

Structures known as “switchbacks” were detected by the Parker Solar Probe (PSP) during its first and subsequent encounters with the Sun and its extended solar corona. These switchbacks were first recognized as sudden jumps in the solar wind plasma flow, characterized by a sharp change in the magnetic field direction - at least 45 degrees from the background orientation - before returning to the original direction within more than 10 seconds. Magnetic switchbacks are believed to be important in heating the solar corona and solar wind and accelerating the solar wind. In this study, we analyze data from several PSP encounters and identify “switchbacks” to study the heating rate of the proton (and electron) in the inner heliosphere. We will compare this heating rate with that observed during quiet periods (i.e., when no switchbacks are present) as a function of heliocentric distance. This study will reveal the role of “switchbacks” in heating the solar wind proton (and electron).

Disciplines: Physics, Math, Computer Science

Importance:

After PSP discovered " switchbacks, " the science community has been interested in them. However, there is a debate about their identity. Several ideas have been put forward about their origin, but it is still unclear. The study we propose in this project will help us understand how they heat the solar wind plasma.

Requirements:

- **Preferred Major**
 - Physics, Math or Computer Science
- **Class work**
 - Physics, Math or Computer Science
- **Programming knowledge**
 - Python or Matlab
- **Software knowledge**
 - NA
- **Other**

Regional Introduction to Plasma Processes

Biography:

Dr. Adhikari is an Assistant Professor at the department of space science in the University of Alabama In Huntsville. Dr. Laxman Adhikari has over 8 years of experience in heliospheric space plasma research, specializing in magnetohydrodynamic (MHD) turbulence transport modeling and analyzing the spacecraft data sets. He has compared his turbulence-driven solar wind model results with Parker Solar Probe (PSP), Solar Orbiter (SoI), Helios 2, Ulysses, Voyager 2, WIND, ACE, Cassini, Pioneer 10, and New Horizons Solar Wind Around Pluto (NH SWAP) measurements.

Is U.S. citizenship required to participate in this project? No

Contact information: Dr. Laxman Adhikari, la0004@uah.edu

Name(s) of Mentor(s) and contact information: Dr. Laxman Adhikari (la0004@uah.edu)

Internship Coordinator/ HR manager: Laura Provenzani, lp0020@uah.edu

Regional Introduction to Plasma Processes

The name and contact information of personnel at the host facility is provided for further assistance with questions regarding the host facility or the project.

Interns will not enter into an employee/employer relationship with the host facility. No commitment with regard to later employment is implied or should be inferred.
